

Web Developer

Applecore Interactive delivers strategic, creative and technical interactive solutions to our clients. As an ISO 9001: 2008 certified company, we deliver projects on time, within budget and according to agreed specifications. Thorough project planning, teamwork and clear communication are at the core of all projects we execute. Meeting these objectives helps our clients, our staff and our company to grow and be successful while remaining true to our founding principle: to be a good place to work and a good place to do business.

Applecore is currently accepting resumes for a *Web Developer* position in its Technical Department.

Detail:

The *Web Developer* role is to build and maintain client web sites and online applications and keep them running smoothly. This includes designing, building, and implementing new web pages, applications and sites; integrating sites with back end databases; and performing day-to-day administration of the organization's web portfolio. Use of a variety of web development languages is required.

Responsibilities:

- Participates in all aspects of the systems lifecycle including analysis, design, development, documentation, testing, deployment, and support of web-based applications.
- Execute the website cutup from site design created by the creative team.
- Database design and query development.
- Develop and code to company standards.
- Edit and create new graphics and images for web content when needed.
- Maintains knowledge of software tools, languages, development methodologies and technical trends.
- Participates in special projects and performs other related duties as assigned.

Competencies:

- Accountable and Results Oriented
- Planning and Problem Solving
- Initiative and Innovation
- Project Management Principles

Interpersonal Skills:

- Adaptability and Flexibility
- Customer Focus

- Communications (written and oral)
- Problem Solving
- Teamwork and Collaboration

Education:

- Bachelor's degree or accredited Diploma in Computer Science, Information Systems, Programming or other related field, OR equivalent work experience required.

Experience:

- Minimum 2-5 years experience.
- Knowledge of the following programming languages/products required: Django, ASP.NET, PHP, XML, VBScript, Javascript, Active Server Pages.
- Experience and knowledge of general user interface design and implementation including HTML, CSS, and Javascript required.
- Outstanding troubleshooting and problem solving skills required.
- Ability to work independently, take initiative and contribute to new ideas required.
- Graphics design experience (e.g. Photoshop) an asset.
- Experience with the design, normalization, and performance tuning of relational databases such as MS SQL Server, MySQL preferred.
- Knowledge of one or more of the following programming languages/products would be an asset: SQL Server, MySQL, Oracle, PHP, XML, Visual Basic, Django, VB.NET, ASP.NET, and the .NET Framework.

If you excel in a team-based environment, have a passion for excellence in electronic communications, have superior written and oral communication skills, strong internal motivation and project management skills, this may be the position for you.
